

Are you scientifically curious and determined to pursue a PhD degree? Are you also interested in understanding why diseases arise and how to develop new treatments? If yes, you might be an excellent candidate for a fully-funded PhD position in discovering treatment from biomedical research at the Biotech Research and Innovation Centre ([BRIC](#)).

The program offers young researchers a 36-months fully funded fellowship, attractive employment and salary conditions. It is a unique opportunity to join an international PhD program within biomedicine. DISCOVER offers research training in a modern research environment at the university and collaboration with one of the neighboring hospitals.

The training programme seeks to:

- empower all students to fully exploit their potential
- nurture scientific creativity and provide a groundwork for a career track in academia
- empower a new generation of responsible researchers with focus on reducing the environmental footprints of research.

Please visit <http://discover.ku.dk/> for more information on the program.

Qualifications:

- Master Degree and maximum three years of experience since issuing of the degree at the time of application
- Master's degree must be equivalent to a Danish master's degree
- Mobility is required
- Applicants may not have been employed at UCPH more than three months prior to the application deadline.

Application deadline: 1st of November 2021

The programme is co-funded by the European Union's Horizon 2020 Research and Innovation Programme under the Marie Skłodowska-Curie grant agreement no. 101034291 — DISCOVER
